PERSONAL DETAILS

Full name Dragos Ionut Camarasan Camarasan

Email dragosic12@gmail.com

PROFILE

Computer engineer (UCM) with full-stack experience in TypeScript, JavaScript and Python. Has built and maintains production applications end to end: the POS system and website for a restaurant (React, TypeScript, TailwindCSS, Node.js with Express and Socket.IO) and SwapCar, a car-swapping app with its own domain (React, TailwindCSS, FastAPI). In the final year project, developed a web application with Nuxt 3, Vue 3, TypeScript and MySQL, with testing in Vitest and Playwright. Currently develops in Java on an existing product at Icaria and deploys with Docker.

EDUCATION

BSc IN COMPUTER ENGINEERING, UNIVERSIDAD COMPLUTENSE, MADRID.
09/2019 - 02/2026

BSc IN BUSINESS ADMINISTRATION AND MANAGEMENT, UNIVERSIDAD COMPLUTENSE, MADRID, SECOND YEAR.
09/2017 - 06/2019

WORK EXPERIENCE

JUNIOR IMPLANTATION SOFTWARE AT ICARIA (ICARIA TDM, GDPR, JAVA, DOCKER)
02/2026 - PRESENT

- Development in Java on an existing product (ICARIA TDM): code analysis, trace tracking and error resolution.
- Direct work on client databases: MySQL, SQL Server, Oracle and MongoDB.
- Deployment of the tool in Docker containers and virtual machines, for clients and training sessions.
- Process automation and script development.
- Direct client interaction.

INTERNSHIP AT SIEMENS, HMI & SCADA DEPARTMENT
10/2024 - 07/2025

- Development and support of software applications in industrial environments.
- Involvement in systems integration, data processing and functional testing.
- Analysis and resolution of technical issues.

COMPUTER LABORATORY, FACULTY OF INFORMATION SCIENCES
01/2023 - 09/2024

- System maintenance, user support and issue resolution.

PROJECTS

• **La Gatta Trattoria, website and POS system in production (React, TypeScript, TailwindCSS, Node.js):** public website and POS system for a real restaurant, in production. POS: backend in Node.js with Express and TypeScript, SQLite and Socket.IO (tables, orders, real-time kitchen screen, payments and user roles) and frontend in React, TypeScript and TailwindCSS. Website: React, TypeScript, Vite, TailwindCSS and Framer Motion, with a custom CMS (Express, TypeScript, Zod, SQLite) to edit the menu and content. Includes an Android kiosk app (Kotlin) for the terminal, and a menu editor and printable publications. **https://lagatta.es**

• **SwapCar, car-swapping app in production (React, TailwindCSS, FastAPI):** web and Android (Capacitor) swipe-based app for swapping cars, published with its own domain. Frontend in React, Vite and TailwindCSS with Framer Motion and Three.js; backend in FastAPI with SQLAlchemy and SQLite: authentication, matches, real-time chat via WebSocket, swap proposals, push notifications, automatic text and image moderation, reporting and GDPR compliance. **https://www.swapcar.app**

• **Final year project, full-stack web application (Nuxt 3, Vue 3, TypeScript, TailwindCSS):** evolution of a support web platform for Universidad Complutense: frontend and backend unified in Nuxt 3 with Vue 3 and TypeScript, interface with TailwindCSS, extensive database in MySQL/MariaDB modelled with Knex (migrations and seeds), business logic based on real-world problems, deployment with Docker, work with GitHub, and unit and e2e testing with Vitest and Playwright. **https://github.com/dragosic/TFG**

• **Nexus Control, administration panel (React, TypeScript, Express):** web panel in React, TypeScript, Vite and TailwindCSS with charts (Recharts) and a custom REST API in Node.js with Express and TypeScript: authentication, SQLite, real-time system monitoring with Socket.IO (CPU, RAM, disk), Docker container management, files and terminal. Used by internal automations.

• **Bilingual technical portfolio (React, TypeScript, TailwindCSS):** personal website in Spanish and English with React, TypeScript, Vite and TailwindCSS: typed content, light and dark mode, an integrated image generator (PWA with Service Worker) and unit and e2e testing with Vitest and Playwright. **https://dragosic12.github.io**

• **Jarvis, voice-based AI agent (Python, FastAPI):** personal voice assistant with frontend in React, Vite and TailwindCSS (PWA) and backend in FastAPI. Includes real-time voice transcription (Whisper/Groq), wake word recognition, voice-based device control, a native Android application (Capacitor) and integration with language models (LLMs) for conversation and task execution.

SKILLS

• **Languages:** Python, Java, TypeScript, JavaScript, SQL, C, C++.

• **Frontend and mobile:** React, TypeScript, TailwindCSS, Vite, Vue 3, Nuxt 3, Angular, Framer Motion, PWA; mobile Android (Capacitor, Kotlin).

• **Backend:** Node.js (Express), FastAPI, REST APIs, WebSockets (Socket.IO), authentication.

• **Databases:** MySQL/MariaDB, SQL Server, Oracle, MongoDB, SQLite; Knex and SQLAlchemy.

• **Testing and quality:** Vitest and Playwright (unit and e2e testing), functional testing, trace analysis and debugging.

• **Systems and tools:** Git, GitHub, Linux, Docker, virtual machines, Nginx, PM2, n8n, Tailscale, Cloudflare.

• **AI-assisted development tools:** Claude Code and Codex CLI used daily (context with CLAUDE.md / AGENTS.md, MCP servers); technical documentation in Markdown.

• **Generative AI / LLMs:** integration of APIs from Anthropic (Claude), Google (Gemini) and Groq (Llama, Whisper; OpenAI-compatible API), prompt design and optimisation, tool calling and structured output.

LANGUAGES

Spanish: Native | **English**: Advanced | **Romanian**: Advanced
